SAS International is a British manufacturer of interior products, delivering the ever increasing demands of clients and specifiers worldwide.

We are solution led, driven by delivering quality, design innovation and maximum value in an ethical and sustainable manner.

Our ongoing investment in manufacturing facilities and processes ensures we provide value-engineered solutions across the built environment.
Since 1968, SAS International has become recognised as a leading global manufacturer of interior fit-out solutions. Best known for our award-winning metal ceiling systems, our interior products can be seen in landmark projects worldwide.

Our approach is guided by our core values:

**Service**
Across the business, customer demands are our primary focus. We recognise that our long-term, sustained success is dependent upon the excellent service we provide. We set the industry benchmark, refining our approach as necessary to deliver unsurpassed levels of customer support.

**Quality**
We have a hard won reputation for manufacturing to the highest quality standards. Our ISO 9001 accreditation validates our commitment not only to the quality of our products, but also our manufacturing processes. We continue to invest in our factories and design resource to maintain our quality leadership status.

**Innovation**
Innovation is the lifeblood for any business and SAS is no different. Internally, cross departmental collaboration feeds into our innovation pipeline, devising interior solutions based on new technology, materials and market drivers. Externally, we collaborate with the world’s top architectural practices and developers on the most architecturally challenging projects. This sharing of ideas and expertise accelerates innovation, delivering world class solutions to evolving requirements, achieving the highest possible standards.

**Dependability**
SAS has the financial stability and manufacturing capacity to deliver the largest scale developments internationally. Throughout, our commercial and technical design teams offer unparalleled levels of support to ensure project success. We are specified worldwide, not just for our quality, but an assurance that we will deliver. Our comprehensive service offering is second to none and depended on in the most challenging of project circumstances.

**SAS sets both the industry benchmark and customer expectations across all facets of manufacturing. Based on our core values, we passionately believe we can successfully achieve your most ambitious goals.**
SAS International is a leading building products manufacturer, producing award-winning interior fit out solutions since 1968. We manufacture a broad range of durable, sustainable and aesthetically-driven products, meeting international design, performance and integration requirements.

We lend our manufacturing expertise to the following product groups:

<table>
<thead>
<tr>
<th>Metal ceilings</th>
<th>Architectural metalwork</th>
</tr>
</thead>
<tbody>
<tr>
<td>Room comfort systems</td>
<td>Fully bespoke interior solutions</td>
</tr>
</tbody>
</table>

Being self-sufficient is integral to the SAS manufacturing process. We consider every aspect of this process, producing the highest quality products as sustainably and cost-effectively as possible. We fabricate our own tooling and maintain our own machinery, minimising lead times and maximising quality.

SAS has a proud manufacturing heritage, establishing the industry benchmark and furthering the reputation of British manufacturing at its best.
Factories
SAS owns and operates three state of the art factories within the UK, manufacturing building products for our international customers. Our multi-site production capacity allows us to successfully supply the most ambitious scale projects internationally.

Our continuous investment in manufacturing facilities and technologies maintains our leadership status. We deploy leading manufacturing theory to ensure our people and processes are safe, efficient and cost-effective with minimal environmental impact.

These factories are at the core of our approach and available for stakeholders to experience first-hand as a guided tour.

Each factory is ISO 9001 (quality management), ISO 14001 (environmental management) and OHSAS 18001 (health and safety management) accredited.

Quality Control

Our quality control teams consist of experts in manufacturing design, materials, machining, and production processes. Constant communication between these experts ensures the highest quality standards are met and ‘SAS quality’ shipped at all times.

With total control of the entire manufacturing process, from design to production, we maintain product quality and ensure maximum value.

Product Testing

The quality and performance of our products is paramount to the success of our business. Where appropriate we ensure that products and systems are tested in accordance with client specifications.

Acoustic Performance

Our reverberation room enables us to undertake research and development into sound absorbing materials and products. The structurally isolated room exhibits non-parallel walls and is accurate above 250Hz. It is ideal for new ideas to be evaluated quickly and efficiently. It is also the perfect complement to our Finite Element modelling of designs.

Structural Performance

Our independently designed test rig facility assesses our ceiling components in accordance with BS EN 13694. This ensures our systems are structurally sound, offer best possible spanning characteristics and minimal deflection. Testing also helps minimise material content, weight and waste. The test rig supports innovation and is key to the development of new and existing products.

Room Comfort

SAS room comfort products are developed in our class leading test centre laboratory. We invested significantly in our labs in 2011 which can simulate large areas such as airports or shopping malls. Having two labs allows us to undertake client project testing and ongoing product development concurrently. All instrumentation and sensors undergo regular and independent calibration.

Value Engineering

SAS understands how to integrate building elements and services to deliver outstanding design solutions. Our in-house design and manufacturing expertise delivers client aesthetic and performance demands in an efficient and cost-effective manner.

Wherever possible we look to provide value engineering through better design, ease of installation, minimal waste and improved manufacturing efficiencies. Our approach delivers your vision to specification and budget.

Offsite Preforming and Factory-fitting

Integration of services at the design stage is key for improved aesthetics and speed of installation onsite.

Apertures can be formed during manufacturing to provide an engineered product for site installation. This alleviates the onsite labour costs and aesthetic implications associated with manual cutting. Services can also be factory-fitted offsite without the risk of damage associated during installation.

Products can be pre-fitted with services and systems, supplied as one integrated unit for ease of shipment and installation. This co-ordination reduces the number of trades required onsite, minimising installation time, labour costs, waste and risk.

Mock-ups

Ceilings are usually designed to integrate with many different products, particularly mechanical and electrical services. Mock-ups offer a fantastic opportunity to fully experience both the ceiling and integrated products.

Our factories are able to fabricate full scale mock ups for review. They demonstrate our commitment and investment to the design and review process for specifiers, clients and project teams. This investment ensures the most complex projects can be managed more effectively prior to onsite installation. The team is able to review and approve the design, or make amends prior to installation. This process significantly improves the successful and timely delivery of projects.
Sometimes an off the shelf system will suffice perfectly well, but often, the architecturally-minded insist on something more. Welcome to SAS Plus.

First and foremost, SAS International is a manufacturer of leading metal ceiling systems and associated products. We have manufactured ceilings for nearly 50 years and in that time have honed our skills and expertise. SAS combines hundreds of years of collective knowledge and is arguably the most technologically advanced ceiling manufacturer globally.

This expertise goes beyond the best way to bend metal in a cost effective and sustainable manner. Our value add includes every stage of the design, manufacture and installation process.
Our Approach to System Design
Our systems have been designed to be flexible, offering the system designer scope to be creative. Supporting this approach, our highly knowledgeable sales teams are technically trained to assist best practice ceiling system design. We endeavour to start a dialogue with the specification team regarding project scope and assist throughout the project delivery. Depending on specification, we can tailor the system to suit the exact budget requirements while maintaining original design intent.

Fully Bespoke Design
Premium projects often demand bespoke applications. The calibre of project dictates the highest levels of quality, design and aesthetics combined. SAS has a long standing history of delivering the very best of bespoke installations.

The approach to bespoke design is as flexible and broad as you can conceivably imagine. The only limitations are the material properties of sheet or extruded metal and what the material allows.

More typical bespoke applications are radial, trapezoidal, vaulted and waveform ceilings. Your designs are not limited to this palette however: SAS has engaged projects with the most far reaching of concepts and delivered them to complete client satisfaction.

For bespoke projects, please consult our technical design team as early as possible in the project design phase. They are on hand to offer expert advice on designing systems that can be manufactured effectively to budget.

SAS Special Projects
SAS has developed an enviable reputation of working alongside the most architecturally influential practices on the highest profile projects worldwide. The delivery of these projects are highly complex, often high risk and at times of national political interest.

We have a specialist division tailor-made to manage and deliver these projects. SAS Special Projects is an internationally-operative team, ideally suited to the project management and delivery of the most ambitious schemes. Their expertise covers all facets of project delivery, from system conceptualisation, fully bespoke system design, manufacturing and onsite installation.

Special Projects works closely with local agents on large scale overseas projects to ensure high quality installation standards. On all projects, we confer with clients, their design teams and contractors on preferred onsite installation processes. Total control of the design, manufacture and installation programme offers clients complete project certainty. Our intimate knowledge of our systems and their installation means SAS is ideally placed to successfully deliver these landmark schemes.

SAS AfterCare
We provide a specialist advisory service for repair, maintenance and alterations for existing clients and facilities managers.

The adaptive nature of SAS ceilings allows for changes of use within the building. Changes may occur due to new tenants, restructuring of existing space or integration of new technology or services.

Our detailed knowledge of existing SAS projects allows us to engage with customers in an insightful and cost-effective manner. Helping to accelerate this process is our comprehensive project database containing original drawings and specifications from historical SAS installations.

Members of the SAS AfterCare team are available to conduct onsite surveys to quickly identify system detail and specification. Any new ceiling or alteration requirement is assessed prior to the placement of any orders. This avoids any doubt or risk associated with complex applications or bespoke products.

SAS AfterCare has expertise in system identification, estimating and design. Our team undertakes all required activities to assist in the maintenance and adaptation of bespoke and complex metal ceiling installations.

These installations typically have close interfaces with other integrated services, such as lighting, ventilation, or even radiant chilled panels.

Full service offering:
• Dilapidations – Renewal or making good at the end of the lease period
• System replacements – Delivering replacements for damaged tiles and ceiling components
• Emergency repairs
• System upgrades – Replacing or upgrading light fittings and/or acoustic materials
• Extensions or modifications to existing installations
• Integration of new building services
• Technical advice

SAS AfterCare is only available in the UK. For more information please call +44 (0) 118 929 0900.
Metal Ceilings

Occupant productivity, wellbeing, comfort and flexibility of space are key considerations for the long term commercial viability of buildings.

Metal Ceilings offer the client and specifier a flexible, aesthetically-led solution to acoustic control, service integration and maintenance demands.

SAS International has established itself as the world leader in the design and manufacture of performance metal ceiling systems. Our interior solutions are beautiful, durable and sustainable. Long term, there is no alternative material that offers a more cost-effective solution to contemporary interior demands.

Why metal?

As a ceiling manufacturer, we are often asked why we concentrate on metal as a manufacturing material. The simple answer is:

- Steel and aluminium are two of the most sustainable materials used in construction.
- Metal is a high quality material, offering improved aesthetics through design flexibility.
- Highly durable and robust, metal maintains its appearance long after other materials need replacing.
- Long term, metal is far more cost effective than alternative materials.
- To date, there is no better performing material that meets all building regulations and customer demands.
SAS Suspended Ceilings

**Clip-in**
Ceiling tiles simply clip into the ceiling grid, offering a concealed grid aesthetic.
Examples
SAS120  
SAS150

**Lay-in**
Flanges on the ceiling tile edges lay onto the ceiling grid, exposing the grid as an intrinsic aesthetic element. Both regular and flush options are available.
Examples
SAS130  
SAS320  
SAS330  
SAS380

**Hook-on**
Perimeter hooks suspend the tiles, concealing the grid. An advantage of hook-on systems compared to clip-in is an increased load capacity.
Examples
SAS200  
SAS205

SAS Baffle Ceilings

**Straight**
Suspended from the soffit via wires, rods or hangers, baffles offer an alternative acoustic treatment to suspended ceilings.
Examples
SAS500

**Curved**
Performance of curved baffles is directly comparable to straight, the obvious difference being curved and waveform options.
Examples
SAS510

SAS Raft & Modular Ceilings

Rafts and modules can form standalone canopies, islands or continuous runs. Applications can be purely aesthetic, acoustic control or fully integrated service options.
Examples
SAS600  
SAS610

SAS Open Cell Ceilings

Open cell ceilings resemble rectilinear and triangular honeycomb grid structures aesthetically treating smoke extraction zones.
Examples
SAS800  
SAS810

Polynodal Ceilings

An adjustable nodal ceiling system used to create multi-faceted ceiling designs.
Examples
SAS900
A major driver of global construction is client aspiration and government legislation to provide ever more sustainable buildings. This includes every aspect of the building from design, construction and waste management to end of life and beyond.

We achieve these demands through better design, responsible sourcing of materials and innovative manufacturing techniques. Our approach provides clients with solutions to achieve environmental accreditations such as BREEAM, LEED, SKA, Green Tag and Estidama.

**Whole Life Costing**

A key design and construction consideration for any sustainable building is its whole life costing. Many factors have to be taken into account including maintenance, repair, refurbishment, waste, energy usage, demolition and disposal.

SAS International partnered a recognised quantity surveying practice to conduct research into the overall lifetime costs of ceiling materials. The report highlighted significant benefits of metal in the context of the whole life costs of a building.

Based on a 20-year lifespan, the report projected achievable cost savings of 47% using SAS systems compared with non-metal alternatives. In addition, the industry consensus was that non-metal products would be considered unserviceable after a period of 10–15 years.

SAS International is ISO 14001:2015 accredited.
Metal offers not only considerable long term capital savings, but also long term sustainable benefits. SAS International will only source materials from suppliers with a progressive and innovative approach to sustainable material manufacturing.

**Steel**

Our grid, suspended tile and panel ceiling systems are manufactured using steel. Steel is 100% recyclable and currently the most recycled material in the world. In 2015, an estimated 585 million tonnes were recycled. To put this into context, it is the equivalent of 220 Eiffel Towers being recycled every day.

Globally, the construction industry consumes 50% of all new steel produced. This steel contains a minimum of 20% recycled metal, but in theory could contain up to 100% reused material. The amount of recycled content varies as it is dependent on scrap availability at the time of production. (The high demand for steel coupled with its inherent long life often outstrips the availability of scrap steel for construction use).

The majority of new SAS steel contains 20-25% recycled material, depending on region. Globally, 80% of scrap steel is recycled. In the UK an estimated 94% of steel used in construction is recovered.

Every tonne of steel recycled makes the following environmental saving:

- 1.5 tonnes of iron ore
- 0.5 tonnes of coal
- 40% of the water required in production
- 75% of the energy needed to make steel from virgin material
- 1.28 tonnes of solid waste
- Reduction of air emissions by 86%
- Reduction of water pollution by 76%

Other metal advantages include no associated landfill costs and significant residual value at end of life. The rising costs of landfill taxes provide obvious reasons to specify steel.

**Aluminium**

Our premium linear ceiling systems and trims are manufactured using aluminium. 25% of all aluminium is used by the global construction industry. It is valued for being light, strong, durable, flexible, impermeable, thermally and electrically conductive and non-corrosive.

The metal is manufactured from bauxite, one of the most abundant materials in the Earth’s crust. It is also infinitely recyclable, 75% of all aluminium ever produced is still in use today, with no quality degradation.

Recycling aluminium uses only 5% of the energy required to manufacture new and produces only 5% of the greenhouse gases. It also produces none of the waste associated with primary production.

SAS International sources aluminium from suppliers using 20-25% recycled material.

**Mineral Wool**

The vast majority of SAS acoustic infill pads are manufactured from mineral wool. This material is manufactured from diabase rock, which is continually replenished naturally within the earth. The material is also 100% recyclable, so no mineral wool should enter landfill at end of life.

**Polyster Powder Coatings (PPC)**

The majority of our ceiling systems are finished in PPC. The coating is known for durability, colourfastness and consistent quality. What should be communicated more clearly is it is also a highly sustainable, environmentally friendly and energy efficient material.

SAS International sources PPC suppliers with impeccable sustainability and quality credentials, who submit themselves to Ecological Efficiency Analysis (EEA). Our selected PPC environmental benefits include:

- Zero Volatile Organic Compounds (VOCs)
- Zero toxic heavy metals, for example lead or chromium (VI)
- Virtually no waste, as overspray can be collected and either recycled or reprocessed
- Long lasting surface protection, maximising product life cycles (min. 25 years)
- Lower curing temperatures, minimising energy consumption and CO2 emissions
- Less natural resource consumption during application through reduced film build up

**EPP’s**

For further information please refer to section on website
SAS International is committed to improving the sustainability of both the built environment and our own manufacturing approaches. Our ISO 14001:2015 accreditation testifies this commitment and offers an internationally recognised validation of our ongoing efforts.
The Building Regulations’ ‘Approved Document B’ for fire safety sets out minimum requirements for the performance of ceilings within buildings. The requirements are tested to European standards (EN 13501-1).

European Standards (EN 13501-1)

SAS ceiling tiles* have a European Class performance of: A2-s1, d0

The first figure sets out the fire behaviour of the product, with a result ranging from A to F:

- A1: Product does not contribute to fuelling the fire at any stage
- A2: Product does not significantly contribute to the fire load nor spread
- B: Product has limited lateral spread of flame with sufficiently delayed and limited heat release

The second figure (‘s’), relates to the smoke behaviour, with three classifications:

- s1: Product emits negligible smoke emissions
- s2: Product emits a limited amount of smoke
- s3: No limitation set for emissions

The third figure (‘d’) relates to the volume of flaming droplets or particles, with classifications of d0-d2:

- d0: Classification requires that no droplets or particles occur at any time during the test
- d1: Stipulates a minimum period of time where no flaming droplets or particles can persist
- d2: Classification does not limit the performance required

*SAS metal ceilings are tested and certified in accordance with UK, European, American and Australian Standards:

EN 13501-1
Fire classification of construction products and building elements

UK Building Regulations
The Building Regulations’ ‘Approved Document B’ for fire safety sets out minimum requirements for the performance of ceilings within buildings. The requirements are tested to European standards (EN 13501-1).

Please note
A suspended ceiling is a non-structural element of the building. SAS does not recommend that any suspended ceiling should be relied upon to protect the structural elements of a building. Nor do we recommend a suspended ceiling being relied upon as part of a fire control strategy.

If you require any further information please do not hesitate to contact our technical department or your fire safety officer.

*Based on up to 22% open area
SAS metal ceilings are tested and certified in accordance with UK, European, American and Australian Standards:

**ASTM E84**
Standard Test Method for Surface Burning Characteristics of Building Materials

**Test Standard**

SAS Plain and Perforated Aluminium Ceiling Panels have achieved a Class A ASTM E84-16 rating.

SAS Plain and Perforated Galvanised Steel Ceiling Panels have achieved a Class A ASTM E84-16 rating.

**Classifications**
Interior wall and ceiling finish materials shall be classified in accordance with ASTM E84 or UL 723 - 10th Ed. 2008. Such interior finish materials shall be grouped in the following classes in accordance with their flame spread and smoke-developed indexes.

- **Class A**: Flame spread index 0 - 25; smoke-developed index 0 - 450.
- **Class B**: Flame spread index 26 - 75; smoke-developed index 0 - 450.
- **Class C**: Flame spread index 76 - 200; smoke-developed index 0 - 450.
AS ISO 9705
Classification by group number indicating the time taken for materials to reach flashover
Classification: Group 1

Australian National Construction Code (NCC) Fire Testing

The National Construction Code of Australia (NCC) and AS 5637.1:2015 stipulates the classification of materials by Group Number, which indicates the amount of time taken for the material being tested to reach flashover under AS ISO 9705 – 2003 test conditions. The NCC and AS 5637.1:2015 define flashover to be a Heat Release Rate of 1 MW, so materials are classified, in accordance with NCC 2016 spec Cl.10 and AS 5637 2015, by the time taken for the Heat Release Rate, as measured during the AS ISO 9705 test, to reach 1 MW per the scheme below;

- Group 1 — Materials classified as Group 1 do not reach flashover after ten minutes exposure to a heat source delivering 100 kW immediately followed by a further ten minutes exposure to 300 kW.
- Group 2 — Materials classified as Group 2 reach flashover after ten minutes of exposure to a 100 kW heat source.
- Group 3 — Materials classified as Group 3 reach flashover after 2 minutes, but before 10 minutes of exposure to a 100 kW heat source.
- Group 4 — Materials are classified as Group 4 if they reach flashover before 2 minutes of exposure to a 100 kW heat source. The NCC and AS 5637.1:2015 also define the smoke growth rate index, or SMOGRARC as a quantity which may be obtained from the smoke obscuration measurements obtained in the AS ISO 9705 test SAS International Ceiling System classification SAS International have carried out a series of Fire Tests in accordance with the above standard for our metal ceiling systems and associated products including:

- Perforated (Up to 22% free area) polyester powder coated metal panels
- Up to 30mm thickness mineral wool acoustic inlays (80 kg/m³ density) and/or Acoustic Fleece backing

The material subjected to this AS ISO 9705 test did not reach a Heat Release Rate of 1 MW during the 1200 second exposure period. Therefore the system has achieved a classification and smoke growth rate:

Classification: Group 1. SMOGRARC 4.4m²s⁻² x 1000
All SAS metal ceilings are designed, manufactured and tested in full accordance with BS EN 13964. This is a requirement of all UK-based ceiling manufacturers.

**Harmonised European Standards**

Harmonised European standards provide a technical basis to assess the performance of construction products. They enable manufacturers to publish Declarations of Performance as defined in the Construction Products Regulation, and affix the CE marking.

The standards are developed by technical experts from the European Standardisation Organisations (CEN/CENELEC). They offer a common technical language accessible to all parties in the construction sector.

From a manufacturer’s point of view, they are a recognised declaration of a product’s performance. From a specifier’s point of view, they verify compliance with requirements and demands.

**CE Marking**

Part of BS EN 13964 requires that the CE mark should be shown on all accompanying commercial documents. Implemented under European Union Council Directive 93/68/EC, each document should carry the manufacturer’s name, trade mark or identification mark.

CE marking has been implemented by SAS International in accordance with these directives.

**International Quality Benchmarks**

Each division has a dedicated site manager responsible for implementing and maintaining our ISO and OHSAS certifications. Our group compliance team ensure all requirements, international standards, legislation and governance are met.

**ISO 9001 Certified ✓ (Quality Management System)**

This certification ensures consistency of products and services and promotes a culture of continuous improvement.

**ISO 14001 Certified ✓ (Environmental Quality System)**

Each SAS factory has achieved ISO 14001 accreditation, indicating our commitment to reducing the environmental impact of our manufacturing processes.

**OHSAS 18001 Certified ✓ (Occupational Health & Safety Management System)**

Each SAS factory has also achieved OHSAS 18001 accreditation, demonstrating a culture of safety and wellbeing, driving our quality output.

Acoustics

Specification Criteria

The science of acoustics and its application within buildings can often be complex and confusing for the non-specialist. SAS International is an expert in this field and can support your project, providing guidance and experience to help you specify the most appropriate products for your design that meet industry and legislative standards. The information below should help explain some of the more relevant acoustic terminologies and technical aspects.

Sound Absorption

This is a measure of how much sound is absorbed by a surface. The remaining sound is reflected back into the space. In the absence of sound absorbing surfaces a room will become noisy and reverberant, because the sound keeps ‘bouncing around’. This results in a number of undesirable effects - poor clarity of speech and excessive loudness being among the most important. As more sound absorption is introduced to a space, so the noise level will reduce and the sound decay more quickly.

Sound absorption is defined as a coefficient between 0 and 1, where the latter means that all sound is absorbed by the surface – thus none is returned to the room. The sound absorption of a surface is not the same for all types of sound. Porous materials are more efficient at absorbing mid and high pitched (or high frequency) sound than low frequency. Thankfully, we are normally less concerned about these low sounds because speech occupies the mid-high frequency range.

The international standard BS EN ISO 11654:1997 defines sound absorption in varying degrees of detail. The Sound Absorption Coefficient (\(\alpha_s\)) and Practical Sound Absorption Coefficient (\(\alpha_p\)) both describe how sound is absorbed at different frequencies. The Sound Absorption Rating (\(\alpha_w\)) simplifies this data further by expressing it as a single figure, obtained by comparison with a weighting curve. In addition, the standard defines Sound Absorption Class, which ranks the effectiveness of a surface from A to E, where A is the most sound absorbing.

Initial selection of a sound absorbing product can normally be based on the single figure \(\alpha_w\) or the Sound Absorption Class. Generally, it is only an acoustician that needs more detailed information.

Sound Insulation

This is the measure of how effectively sound is limited when passing through a building element. Sound insulation is important for glazing, partitioning and ceiling systems where the passage of sound from one space to another needs to be controlled. Two definitions of sound insulation are used depending on the product and its installation.

The first of these definitions is sound reduction, which is a measure of how effectively sound is blocked by an element – a ‘single pass’. As with sound absorption, it is not the same for all types of sound and is normally worst at the low frequencies. If the sound reduction performance is stated as a single figure it uses the R for reduction and a subscript ‘w’ which stands for ‘weighted’. As such, a \(R_w\) figure is a simplified indication of how much direct sound is stopped from getting through a building element. It is used to describe glazing and partitions.

In addition to the direct ‘straight through’ definition, sound insulation is also quantified in terms of a ‘flanking’ route – the so-called ‘double pass’. The abbreviation used is \(D_{nfw}\) which means a sound level difference via a flanking route that is normalized and weighted (this supersedes \(D_{ncw}\) where the ‘c’ is an abbreviation for ceiling). It basically defines how much sound is blocked by passing through the same element twice. This is a relevant metric for ceilings which span more than one room and have a common void.
### Sector Acoustic Criteria | Relevant Standards

There are many different standards that relate to the acoustic performance of buildings, some legislated and others for guidance only. The following sections describe those standards that are relevant to the SAS product portfolio.

#### Commercial Offices

The 2014 BCO (British Council of Offices) ‘Making The Business Case for Well Being Study’ states:

> "... 26% of UK employees found the acoustics of their office unpleasant and 77% of those blamed this on a noisy open-plan environment. A further 27% are frustrated by a lack of privacy."

In light of this study, the BCO published the ‘Guide to Specification 2014’ which includes reference and guidance for acoustic issues. This includes advice on acceptable levels of acoustic privacy between cellular offices and reverberance in various type of spaces, referencing BS 8233:1999.

The acoustic characteristics of open plan spaces are often different from smaller rooms because of their ‘flat’ proportions where the height is much less than the plan dimensions. Given that the ceiling is such a significant surface, it is essential that a sound absorbing product is employed in this area to control reverberance and occupational noise. A suspended ceiling is often a suitable solution, though if the thermal mass of the soffit needs to be exposed, rafts or baffles can be employed.

#### Transport Hubs and Retail

The speech intelligibility of public address and voice alarm (PAVA) systems is a regulatory requirement in many countries. Failure to properly understand these broadcasts can hinder evacuation in the case of an emergency. Speech intelligibility is a function of background noise and reverberance, both of which can be controlled with sound absorbing materials.

#### Education

Worldwide studies have shown that well designed acoustic environments boost learning potential. Classrooms with poor acoustics can have a detrimental effect on children’s learning and development as well as possibly leading to voice and throat problems for teachers. In the UK, Building Bulletin 93 (BB93): Acoustic Design of Schools (2014) sets out mandatory requirements for the acoustic performance of schools. Compliance with these regulations must be demonstrated to the Building Control Officer through a comprehensive design report. BB93 applies to all primary and secondary schools. It does not apply to nurseries (unless part of a school), sixth form colleges (unless established as a school) or higher education facilities. BB93 performance targets include schedules for reverberance, internal noise levels and internal sound insulation. Satisfying these three acoustic criteria depends, to a greater or lesser extent, on the sound absorption present in a space. Sound absorbing suspended ceilings, baffles, rafts and wall panels represent various options open to the designer.

#### Residential

Part E3 of the UK Building Regulations stipulates that sound absorbing finishes are required in the circulation spaces of apartment buildings. This measure limits the passage of sound around a building, thus minimising the noise egress from one apartment to another via the corridor. Part E identifies ceilings as the most practical surface on which to place sound absorption.

#### Healthcare

Occupant comfort within a healthcare environment is known to be associated with patient recovery times. The UK National Health Service has provided guidance on these matters through its Health and Technical Memorandum 08–01 (HTM 08–01). This standard, and similar ones published in other countries, have increased the profile of acoustic design within hospitals. HTM 08–01 sets out acoustic performance requirements relating to reverberance in sensitive spaces and advises that products achieving at least Sound Absorption Class C should cover at least 80% of the floor area. A smaller area is acceptable if a product can offer Class A or B absorption – advice should be sought from an Acoustic Consultant to properly quantify this.
Sound Absorption
SAS products absorb sound using an open-cell porous material faced with a perforated metal sheet. The perforated metal offers no acoustic function other than to be ‘transparent’ to the incident sound. This is achieved by forming numerous holes of appropriately large diameter. Acoustic transparency is limited as the hole diameter approaches the thickness of the metal sheet. Similarly, perforation areas of less than 10% result in the higher frequency sound being reflected as it ‘sees’ too much metal and not enough hole. There is limited benefit in using perforation areas greater than 25%.

Most ceiling tiles rely entirely on the porous material behind the perforated metal to absorb the sound. Micro-perforated tiles are the exception and can offer sound absorption without a distinct porous backing. In both cases, sound is absorbed because the air particles have to vibrate within a medium that limits this movement. Porous absorbers are most effective when they coincide with air that is vibrating a lot. However, the vibration of air particles is not the same at every frequency or in every location within a room. As such, the effectiveness of a sound absorber is dependent on where it is placed.

Baffles and Rafts
Baffles and rafts are similar in design to wall panels. The main difference is in terms of their position and orientation within the room. Baffles and rafts are placed a long distance from the soffit and as such are ‘in the room’ and acoustically do not act like one of its surfaces. The particle velocity in these locations is not easily predicted and not likely to exhibit high magnitudes. However, because these elements are ‘in the room’ they are an acoustic ‘object’ not merely a surface. The larger contact area and diffractive effects at the edges result in sound absorption that is greater than the same single-sided area placed parallel and close to a soffit. It is an oversimplification to assume that it will exhibit twice the sound absorption in line with a doubling of ‘visible’ area. This argument ignores the importance of it’s position in the room and the low frequency transmission through the raft/baffle

Suspected Ceilings
Suspected ceilings are positioned a small distance from a sound reflecting surface which means that the air particle vibration (or particle velocity, as it is called) is easily predicted. It also means that the particle velocity is high, at a given frequency, which results in efficient absorption. This optimum placement is the reason why very thin porous materials can offer significant absorption. Nevertheless, thicker porous linings are generally more effective than thin ones.

Wall Panels
Wall panels are similar to suspended ceilings in terms of being close to a sound reflecting surface. The sound absorption is often poorer at low frequencies because the gap between the panel and wall is less than a typical suspended ceiling void.

The Science Explained

It is often helpful to understand some of the basic science behind how SAS products provide the performance quoted. An acoustician should be familiar with these concepts, however it is understood that such expertise is not available on every project. In that event, SAS’ acoustic specialists are pleased to assist.
Sound Insulation

Sound is able to pass through solid elements like doors and partitions. This is possible because the vibrating air particles cause the solid element to vibrate also, albeit on a very small scale. The vibrating element then causes the air particles on the opposite side to vibrate and this is perceived as sound.

It can be intuitively understood that heavier elements will offer more sound insulation because they are more difficult to move (Newton’s second law of motion). In fact there are well established relationships between mass/area and sound insulation.

Sound energy is dissipated and reflected as it moves from one medium to another. For this reason, multi-layered constructions are efficient at providing sound insulation even if they are lightweight. A plasterboard partition is a good example of a laminate construction which can offer similar sound insulation to an homogeneous element that is much heavier, like a concrete block wall.

Acoustic Performance of Metal

It is a common misconception that perforated metal is a poor sound absorbing material, outperformed by alternatives such as mineral fibre. Through careful specification of the size and number of perforations, metal tiles with mineral wool infills offer sound absorption equal to or greater than other commonly specified materials.

Test Data

The acoustic tests undertaken by SAS quantify the performance of the tiles, not the complete system. The reason for this is that it is unfeasible to test the multiplicitous combinations of tile and suspension system. It is the perforation type, infill and cavity depth that govern the acoustic performance of a system – other variables have very little affect.

Change in Ceiling Void Depth

Most SAS systems are laboratory tested using a 400mm void depth. If other void depths are used then the sound absorption performance will change at the low frequencies. As the cavity depth decreases, so the low frequency limit of sound absorption increases. For example, the sound absorption at 800Hz associated with a 100mm will be similar to the absorption at 200Hz due to a 400mm cavity. The effect of not employing a cavity can be seen by considering the performance of a tile backed with plasterboard or a steel plate.

Effect of Borders Around Perforated Area

There are options for different border widths around the perforated tile area. Whilst a larger border will theoretically result in less sound absorption, the effect in practice is minimal.

Effect of Tile Size

Larger tiles provide greater sound absorption at low frequencies. This is because they exhibit lower stiffness and as such support flexural waves, also termed panel absorption.
Ceiling Tile Acoustic Performance

All SAS products are tested independently by a UKAS accredited laboratory.

Tested in accordance with BS EN ISO 354:2003.

Aesthetics
Aesthetics

Strategic investment in quality aesthetics offers a significant return. On average, 80% of operational spend within an organisation can be attributed to staff-related costs. Beautiful interiors attract staff, increase their retention, positively improve employee wellbeing and communicate the right values to potential clients. A desirable building in the right location minimises these staff-related costs, improving profitability for both occupiers and owners.
Ceilings can have a dramatic impact upon an interior, both complimenting and accentuating the overall design. There are numerous ceiling types to consider, each with its own unique aesthetic. Each SAS system, regardless of design preference, benefits from the inherent material properties of metal.

SAS systems are designed for flexibility and offer the specifier scope to be creative. All systems are compatible and can be configured differently, from simply changing the tile size to complete bespoke solutions.

Suspended Ceilings

<table>
<thead>
<tr>
<th>Grid</th>
</tr>
</thead>
<tbody>
<tr>
<td>There are two main types of ceiling grid, exposed and concealed. The choice of grid is typically dictated by aesthetic preference. Exposed grids can be flush with the ceiling plane, or recessed, and tiles can be modular or manufactured to modules. Exposed grid systems such as SAS330 allow for services to be integrated into the grid as well as the tile. Exposed grids can also be linear (one directional) or tartan (multi-directional, typically but not necessarily perpendicular). Concealed grids, as the name would suggest, reflect just the tiles to form a flush, monolithic appearance.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Tiles</th>
</tr>
</thead>
<tbody>
<tr>
<td>SAS manufactures tiles to common module sizes, such as 750x750mm and 600x600mm. The system designer is not limited to this and can specify ceilings in numerous shapes and sizes. Suspended ceiling tiles can be manufactured to any triangular, rectilinear or trapezoidal shape up to 1250mm² (adhering to BS EN 13964). Please note * Tile sizes over 750mm² are considered large format (SAS Mega Panels). To remain within industry tolerances, large format tiles are typically no greater than 1200mm². Tile sizes greater than 1200mm² are technically possible, but may need additional manufacturing processes to remain within tolerances. Large format tiles are only suitable for certain systems, please contact our technical services team for guidance.</td>
</tr>
</tbody>
</table>
Ceiling Baffles

In exposed soffit applications, baffles offer an effective and attractive acoustic alternative to a more traditional suspended ceiling. Baffles can be rectilinear or waveform, with further bespoke options available. Baffles offer impressive absorption characteristics and can be continuous, ideal for wide span applications such as atria. In addition, lighting and other services can be integrated.

Linear Ceilings

Offering a completely different aesthetic again, linear systems can also be used in smoke extraction applications. Typical applications, however, are largely aesthetic in nature (although SAS740 and SAS750 can offer acoustic performance too).

Polynode

Polynode is an adjustable nodal ceiling system used to create multi-faceted ceiling designs. This polynodal system meets the demand of increasingly varied and complex ceiling surfaces in modern building design. Simple equilateral triangle tiles can create a near infinite variety of polyhedral ceiling forms. Our patent-pending nodal system can also be used to transition from ceiling to wall.

Ceiling Rafts and Modules

Typically used in exposed soffit applications, rafts and modules tend to be specified where designated zones require acoustic control. Individual panels (rafts) or islands (raft/module clusters) offer a variety of design and installation options. Rafts can be shaped or rectangular and can also integrate services.

Open Cell Ceilings

Smoke extraction applications require a considerable open area within a ceiling to function, ideally serviced by open cell systems. With a distinctive appearance open cell ceilings can be used to great effect in other applications to visually draw attention.
From virtually unnoticeable to strong design feature, perforations can have a significant impact upon the overall ceiling aesthetic.

The choice of perforation is largely dependent on acoustic demands and restricted to a required % open area. However, there are numerous choices to enhance the overall design within each % range and bespoke options are also available. So long as it can be punched through metal sheet, any pattern or design is theoretically possible. Alternatively, plain panels can be specified in areas requiring acoustic reflectance.

**Perforation Borders**
Tiles and panels can either be completely perforated, or specified with defined borders. Plain borders typically have a nominal width of 10mm. Alternative border widths can be manufactured within the constraints of the perforation pattern and panel size.

Larger border sizes can be used to create a tartan effect or provide a plain visual grid for partition layouts.

**Apertures within Plain Zones**
Perforated tiles with service apertures can be modified to include plain border frames around services.

**Bespoke Perforations**
Our in house tooling department is able to manufacture perforation tooling to meet any bespoke perforation requirement.
Perforations

Things to Consider when Specifying Perforations

**Direction**
Some perforations are directional and will appear differently depending on viewing direction. This feature can be used to alter the visual appearance of a ceiling, for example creating a checkerboard pattern.

**Patterns**
Perforations can be grouped into squares to create distinctive geometric patterns across the tile face.
Different perforation groups can be manufactured within the same tile, giving the impression of a number of smaller tiles.

**Colour**
Perforations will have an impact on colour tone and light reflectance values.

**Sound Absorption**
For affective sound absorption, we would recommend a perforation with an open area no less than 10%.

**Multi-service Panels**
Several services can be integrated within a single ceiling tile, each with appropriate borders and spacing.

**Integration with Diffusers**
Perforated panels can be used to accommodate a range of airflow requirements including air conditioning and displacement ventilation.
SAS can integrate air diffusers into the ceiling plane with a change of perforation to the appropriate ceiling tile.

**Chilled Ceilings**
Chilled Ceilings can be supplied with 25% open area tiles to provide acoustic absorption in addition to temperature control.

**Chilled Beams**
SAS Chilled Beams can be installed above a perforated metal ceiling with an open area of 39% or more.

Complete flexibility on perforation subject to acoustic requirements, please contact the technical design team.
Mesh & Expanded Metalwork

Whether driven by aesthetic needs or smoke extraction requirements, mesh is an increasingly popular tile option. SAS has been manufacturing expanded metalwork for decades and recently launched a new range of mesh options.

Our standard mesh options are available for SAS330. Configurable options are also available for SAS130, SAS200, SAS205, SAS320, SAS330 and SAS600.

Non-standard bespoke options can also be manufactured to specification. For more information on bespoke mesh systems or patterns, please contact our technical design team.
Typically, SAS ceiling systems are finished in polyester powder coat (PPC), for the quality of finish and durability. PPC offers excellent protection, affording a minimum warranty of 25 years.*

<table>
<thead>
<tr>
<th>Colour Choice</th>
<th>Alternative Finishes</th>
<th>Performance Coatings</th>
</tr>
</thead>
<tbody>
<tr>
<td>The vast majority of SAS projects specify white (RAL9010), which is why it has become our standard. In reality, any RAL colour can be specified in PPC to suit project requirements. We are also able to offer PPC finishes with metallic flecks, pearlescent sheens, or light textures. Please refer to page 111 for more information.</td>
<td>Specifications are not necessarily limited to flat RAL colours, either. A host of special effect finishes are also available, including but not limited to, polished metal, wood and ceramic effects. Aluminium systems can also be anodised, opening up another range of aesthetic options. Please refer to page 111 for more information.</td>
<td>SAS supplies non-standard coatings for specific applications, such as Anti-Microbial coatings for healthcare, or fine-textured coatings for pure matte requirements. If you have a specific niche application, please contact our technical design team for more information. Please refer to page 111 for more information.</td>
</tr>
</tbody>
</table>

* Warranty is dependent on adherence to best practice installation procedures and normal atmospheric conditions. Harsh conditions will limit the PPC warranty to 15 years.
Border & Perimeter Trims

Interior spaces are greatly enhanced when proper consideration is given to the finer details. Inadequate interface detailing detracts from the overall quality of the solution, drawing unwanted attention to these unnecessary imperfections.

Edge details effectively ‘finish’ the ceiling, completing the perimeter or transitioning into other materials such as plasterboard surrounds. This is an important design consideration and numerous trims are available, including floating edge, shadow gap and flush options.

Simple to install, SAS border and perimeter trims create a clean, crisp finish to a ceiling edge or transition. Our extensive range of aluminium trims offers the system designer a highly flexible approach to ceiling design. In addition to standard trims, we design and manufacture custom made extrusions for specific demands.

Aesthetics

**Standard Finish**

- Exterior quality Polyester Powder Coat (PPC) adhering to BS 6496
- RAL9010 (white) 20% gloss
- 1000 hour (min.) salt spray test performance
- Alternative colours can be selected from the BS and RAL colour ranges

**Special Finishes**

- SAS FT – a finely textured matte finish to mimic plasterboard surfaces
- SAS AM – an anti-microbial coating for healthcare or lab applications
- Aluminium trims can be anodised (any available colour)
- Aluminium trims can also be polished and chemically brightened (silver, gold, copper or brass)
- Optional high porosity primers – providing greater adhesion for drywall jointing and finishing compounds

Please note: Trims can be finished in any coating available for SAS ceiling tiles. Please consult our technical design team for more information.
One of the most significant design benefits of metal is the ability to fully integrate M&E services within the ceiling. Anything from lighting, speakers and sprinkler systems to chilled and heated ceiling elements. Detailing is controlled in an aesthetically pleasing manner, integral to the overall design concept. Apertures can be pre-formed during manufacturing to ensure the installation mirrors the design intent.

Please Note: Unless otherwise stated, each ceiling system is designed to support its own weight only. If significant weight is being added through integration with third party products, additional or independent support may be required. Please contact our technical design team for advice.

Perforations
SAS Perforation Codes
To aid the specification and understanding of perforation patterns, SAS perforation codes break down into three simple sections.

For example:

So, S1820 has a square pitch with 1.8mm punched perforation and 20% open area.

S1820

The first letter (D or S) indicates whether the pitch is diagonal or square to the edge of the tile.

D 1061
Ø10.0mm, 61% Open Area

The first two numbers indicate the size of the punched hole. 18 indicates 1.8mm diameter.

The final two numbers indicate the percentage of open area. 20 indicates a 20% open area (before paint).

D 1505
Ø1.5mm, 5% Open Area

Complete flexibility on perforation subject to acoustic requirements, please contact technical team.

All dimensions are in mm.
Perforations | Overview

**D1513**

Fluted perforation (bespoke)
Mesh
An increasingly popular material option, mesh is an ideal choice to achieve contemporary design aesthetics and is an alternative option to exposed soffit. Across commercial, transportation, retail, leisure and educational sectors, we work directly with architects, designers and contractors to meet the desired aesthetic and functional needs of the project.

SAS Mesh has a wide range of pattern and finish options and can be manufactured to the specifiers shape and design.

**System Features**
Specified for its textured appearance, the additional main features of SAS International mesh panels include:
- Compatible with multiple SAS systems
- Available in six patterns and the full range of RAL colours
- Incorporates M&E services and complex building layouts
- Adjustable to bespoke designs

**Tile Shape & Design**
Mesh can be designed and manufactured in a wide range of patterns including profiles that are round, square, diamond and hexagonal.

For best results and to maximise the strength of the material, mesh should be specified with the long-way pattern direction across the tile width.

Specification considerations for mesh include:
- Visible face (‘A’ face as standard)
- Open view orientation
- Longway direction (across width as standard)
- Pattern selection
- Finishes and integration requirements

**Bespoke Designs**
Non-standard, bespoke options can also be manufactured to specification. Please contact our technical design team for more information on bespoke mesh patterns and applications, access, security, service integration and load support.

**Finishes Availability**
- Coating – Polyester powder coat
- Colour – Available in a full range of RAL PPC

**Lighting and Integration**
Various effects can be achieved using light location. From discreet illumination to bold up-lighting, the expanded metal provides multiple possibilities.

Like other suspended metal ceilings, the system can also be designed with cut outs for lights and sensors. For precise and secure integration, flanged lights and vents are recommended and should be independently supported.

**Texture (A and B side)**
The mesh manufacture process results in the material having a different appearance depending on which face is visible. Tiles are manufactured with the ‘A Face’ visible as standard but if desired the ‘B face’ could be specified as the finished face.

The ‘A’ side of the tile is smoother with more gentle curves while the “B” side has a more pronounced texture. Depending on aesthetic preference, specifiers will need to choose their preferred visible face.

**Acoustic Performance**
Acoustic mineral wool pad tissue wrapped.

Other acoustic treatments are available, depending on project requirement. Please contact our technical department for more information.

**Storage and Handling**
Full PPE must be worn due to the nature of mesh.
Mesh | Overview

Orientation
Mesh is an excellent architectural material because of its textured surface providing depth and visual interest. The appearance of mesh changes when viewed from different angles defined as ‘open view’ and ‘closed view’. The ‘open view’ allows light to pass through the gaps while the ‘closed view’ reflects light on the surface depending on the viewer’s perspective.

**LW** Long Way  
**SW** Short Way  
**S** Strand Width  
**T** Strand Thickness  
**MT** Mesh Thickness

Compatible Systems
SAS systems compatible with mesh are:
- SAS130  
- SAS200 and SAS205  
- SAS320 and SAS330  
- SAS600 rafts

Finishes
**Finishes**

Strategic investment in quality aesthetics offers a significant return. On average, 80% of operational spend within an organisation can be attributed to staff-related costs. Beautiful interiors attract staff, increase their retention, positively improve employee wellbeing and communicate the right values to potential clients. A desirable building in the right location minimises these staff-related costs, improving profitability for both occupiers and owners.

<table>
<thead>
<tr>
<th>PPC</th>
<th>Anodised Aluminium</th>
<th>Timber Effect</th>
</tr>
</thead>
<tbody>
<tr>
<td>Polyester powder coating is the process of electrostatically applying dry powder to a substrate and heating to melt the powder forming a ‘skin’ around the material.</td>
<td>Anodising is the process of finishing on aluminium using electrical currents, this gives an altered aesthetic and improved corrosion resistance. A wide variety of colours and surface treatments are available, please enquire for further details.</td>
<td>Timber effect paint finishes give the effect of real wood, however offer the benefits of metal. They can be perforated to give a high level of acoustic absorption, larger panels are possible due to lighter weight, stability of product and higher reaction to fire performance. Almost any timber can be replicated through a number of processes.</td>
</tr>
<tr>
<td>The main benefits of this process over traditional wet paint is the durability of the finish, additionally no solvents are required during the application process.</td>
<td>Please note Aluminium will normally be used as the base material. Fixings and cut details will need to be carefully reviewed to ensure the integrity of the finish is not compromised.</td>
<td></td>
</tr>
<tr>
<td>PPC is typically a smooth finish available in a range of gloss levels however textured finishes are available and give the illusion of a lower gloss level. Antibacterial and Anti-graffiti variants are also available.</td>
<td>Special PPC’s are bespoke powders designed to simulate certain materials. There is a vast array of finishes available such a mirror finishes, high gloss and anodic effects. Please enquire for further details.</td>
<td></td>
</tr>
<tr>
<td>Enhanced Performance PPC</td>
<td>Enhanced performance PPC is designed to be used in corrosive environments. Specialised powder and additional processes during the application ensure paint can withstand harsh environments.</td>
<td>Natural Finishes</td>
</tr>
<tr>
<td>Exposing the natural finish of the material is also possible. A range of techniques, from clear powder coat to hand applied patination are possible. Unfinished metal is never recommended and processing marks will be visible whenever exposing the natural finish of the base material.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

For further information on finishes please contact the technical design team.

HAVE A QUESTION?

Configurable with other products. Call us.
Contact us on enquiries@sasintgroup.com
SAS120 is ideally suited to interiors requiring frequent cleaning regimes or an economical solution to secure void access. Clip-in systems allow for upward cleaning pressure without dislodging or displacing tiles. If required, voids can be secured through the use of a simple clip mechanism.

Hospitals and food preparation areas are ideal examples of appropriate environments, however the system is suitable for numerous applications.

### Module Sizes (mm) with 4mm bevel

<table>
<thead>
<tr>
<th>Size</th>
<th>300 x 300</th>
<th>300 x 600</th>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>500 x 500</td>
<td>500 x 1500</td>
<td>600 x 600</td>
<td>600 x 1200</td>
<td>750 x 750</td>
</tr>
</tbody>
</table>

Bespoke module sizes and shapes are available on request.

### Access

Downward Demountable – The void is completely accessible with the use of a simple tool.

Alternatively, in areas where security is paramount optional security clips are available. This restricts access to the void to minimise security concerns.

### Finishes

SAS120 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request.

### Perforations

Typically supplied with 1522 (available as stock item), 1820 or 2516. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

### Acoustic Materials

Acoustic mineral wool pad with black tissue face, foil back and sides. Other acoustic materials are available please refer to page 22.

Please note SAS120 is not suited to all SAS acoustic materials due to maximum loads on clip-in systems.

### Service Integration

Tiles can be formed with apertures during manufacturing and post painted for integration with lights and other services.

Please note SAS tiles will support loads up to 2.5Kg. SAS pattresses can be used to support loads up to 6Kg. Anything in excess of 6Kg requires independent suspension.

### Technical Support

Please contact our technical team for all questions relating to access, security, bespoke features, acoustics, service integration or load support.

*Note: This includes the entire system and full associated components (suspension, tile, acoustic pad and associated fixings.)

*HAVE A QUESTION?

Configurable with other products. Call us.
Contact us on enquiries@sasintgroup.com
SAS130 offers either a flush (Alugrid) or tegular (Tee Grid) finish metal ceiling, depending on aesthetic preference. Lay-in tiles are quick to mount and dismount offering simple access to the ceiling void.

The suspended ceiling integrates seamlessly with both partitioning and signage for hassle free installations (Alugrid Q). The system can also form an airtight seal (with Alugrid Cleanseal) for air management and moisture control applications. Typical applications of SAS130 include commercial offices, Data Centres and labs.

**Module Sizes (mm)**

- 500 x 500
- 600 x 600
- 750 x 750

Bespoke module sizes and shapes are available on request.

**Access**
The void is completely accessible by removing the lay-in tiles, with no need for specialist tools.

**Finishes**
SAS130 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request.

**Perforations**
Typically supplied with 1522 (available as stock item), 1820 or 2516. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

**Acoustic Materials**
Acoustic mineral wool pad with black tissue face, foil back and sides. Other acoustic materials are available, please refer to page 22.

**Service Integration**
Tiles can be formed with apertures during manufacturing and post painted for integration with lights and other services.

**Please note**
Alugrid-Q sections can be supplied with “bird’s mouth” mitres on one side only. These form a flush abutment to lighting and other services resting directly on the grid. These sections are suitable for ceilings where the services are of a larger modular size than the ceiling tiles.

**Please note**
SAS130 can support additional loads up to 3Kg. This is based on a point or uniformly distributed load over 0.36m², with hanger centres positioned 1200mm apart, maximum. For loads greater than 3Kg, SAS recommends using independent suspension.

**Airtightness and Acoustics**
The Alugrid-P Cleanseal grid option creates an airtight barrier between the grid and tile. This stops unwanted dirt getting in behind or falling through the tile. This can be a highly desirable trait in labs and Data Centre applications.

**Partitioning and Signage**
The continuous linear thread form allows the easy location and relocation of partition heads by means of an M6 bolt. The design of Alugrid-Q means this can happen repeatedly without causing damage. This same feature also allows for hanging signs and other lightweight features.

**Technical Support**
Please contact our technical team for all questions relating to access, security, bespoke features, service integration or load support.

---

*Note: This includes the entire system and full associated components (suspension, tile, acoustic pad and associated fixings.)*
SAS150 offers all the benefits of SAS120, with the additional convenience of hinge-down access minimising risk of damage. Clip-in systems allow for upward cleaning pressure without dislodging or displacing tiles. If required, voids can be secured through the use of a simple clip mechanism.

Hospitals and food preparation areas are ideal examples of appropriate environments, however the system is suitable for numerous applications.

Access
Hinge down and slide – The void is completely accessible with the use of a simple tool.

Alternatively, in areas where security is paramount optional security clips are available. This restricts access to the void to minimise security concerns.

**SAS150 | Features**

**Hinge and Slide Facility**

SAS150 allows every full tile to pivot and slide along the grid system. This feature facilitates easy access to large areas of the ceiling void for maintenance. Tiles are retained within the ceiling grid avoiding damage and eliminating the need for storage.

**Service Integration**

Lighting and other services can be integrated with SAS150. Modular lighting can be supported directly from the soffit. Where maximum point loads are exceeded (2.5Kg) the service must be supported independently or from the grid.

Loads in excess of 2.5Kg and up to 6Kg can be supported by an SAS Pattress. This distributes the load across the SAS Omega Bar and eliminates the need for complicated support arms. Loads in excess of 6Kg must be supported independently. For more information on load support, please contact our technical design department.

**Bulkhead Closure Panels**

Bulkhead closure panels enable floating rafts and ceilings to be created using a standard clip in ceiling tile. The height of the closure panels can be manufactured to suit project requirements. For more information on closure panels, please contact our technical design department.

SAS200 is a concealed grid suspended ceiling system offering significant creative flexibility. The highly adaptable system is often used as a basis for fully bespoke designs. Due to its inherent versatility, the J-Bar hook on system can be used in a wide variety of applications.

**Module Sizes**
There are no standard tile sizes for SAS200. Tiles can be up to 3000mm in length and no less than 300mm wide. Bespoke module sizes and shapes are available on request.

**Access**
Tiles can simply be lifted and removed from the grid.

**Finishes**
SAS200 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request.

**Perforations**
SAS200 can be manufactured with any standard SAS perforation. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

**Acoustic Materials**
Acoustic mineral wool pad with black tissue face, foil back and sides. Other acoustic materials are available, please refer to page 22.

**Service Integration**
Tiles can be formed with apertures during manufacturing and post painted for integration with lights and other services.

Please note
Loads in excess of 6Kg require independent suspension.

**Technical Support**
Please contact our technical team for all questions relating to access, security, bespoke features, acoustics, service integration or load support.

Please note
Panels are supplied with a standard 3mm wide, black gasket.

SAS205 is a SAS200 variant, designed specifically for corridor applications. The suspended ceiling system is supported at its perimeters, up to a maximum of 3000mm widths.

Areas requiring frequent access for maintenance, such as hospitals, residential-blocks and hotels are ideal applications. SAS205 is also commonly specified for commercial offices to blend seamlessly with other SAS suspended ceiling systems.

**Module Sizes**
There are no standard tile sizes for SAS205. Tiles can be up to 3000mm in length and no less than 300mm wide. Bespoke module sizes and shapes are available on request.

**Access**
Swing down and hang. Tiles can pivot on one edge to hang in place, offering full void access while keeping tiles safe from harm. This access method is subject to corridor height and width.

**Finishes**
SAS205 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request.

**Perforations**
SAS205 can be manufactured with any standard SAS perforation. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

**Acoustic Materials**
Acoustic mineral wool pad with black tissue face, foil back and sides. Other acoustic materials are available, please refer to page 22.

A tile-only system, SAS320 has no gridwork, reducing costs and allowing for quick and simple installations. The system is suspended from edge trims or other suitable features such as lights or grilles. Intended for corridor and plasterboard surround applications, SAS320 is ideal for residential and commercial sectors with targeted acoustic demands. Tiles can be of any size to suit most building modules and trimmed for improved aesthetics across undulating walls.

Module Sizes
There are no standard tile sizes for SAS320. Tiles can be up to 3000mm in length and no less than 300mm wide. Bespoke module sizes and shapes are available on request.

Access
Tiles can be lifted and removed for void access. No gridwork offers clear access to services above.

Finishes
SAS320 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request.

Perforations
SAS320 can be manufactured with any standard SAS perforation, and Ultramicro perforation for a brighter finish. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

Acoustic Materials
Acoustic mineral wool pad with black tissue face, foil back and sides. Other acoustic materials are available, please refer to page 22.

Service Integration
Tiles can be formed with apertures during manufacturing and post painted for integration with lights and other services.

Please note Loads in excess of 7Kg require independent suspension.

Technical Support
Please contact our technical team for all questions relating to access, security, bespoke features, acoustics, service integration or load support.

The industry benchmark suitable for any building module, the versatility of SAS330 has seen it specified in landmark projects worldwide. Available in linear or tartan grid forms, the system combines beautiful aesthetics with high performance in equal measure.

Delivering unsurpassed creative potential, ceiling tiles can be curved, coffered and manufactured in virtually any polygonal shape. They are available in a variety of high quality finishes, both plain and perforated. In addition, SAS330 offers service integration details sympathetic to the overall design.

<table>

Grid Options

Linear Grid
C-Profiles set out to run in one direction across the ceiling plane.

Tartan Grid
C-Profiles set out to run in two perpendicular directions (cross nogging) across the ceiling plane.

C-Profile
A flush, smooth finish C-Profile available in a range of widths up to 300mm.

Omega C-Profile
Featuring a continuous thread-form facilitating easy location and relocation of partitioning. By means of an M6 bolt, partitioning can be relocated without causing damage to the ceiling. Also available in widths up to 300mm.

C-Profiles in widths ≤150mm can be open ended, using splices to connect longer runs. C-Profiles in excess of these widths must be closed ends, butt-jointed and bolted to other profiles. A range of narrower C-Profile and Omega C-Profile aluminium extrusions are available if preferred.

An optional foam gasket provides a tight seal between profile and tile. Gasket is supplied loose for on-site installation.

C-Profile Options
Applicable to both linear and tartan.

SAS330 | Features

Touch Latch and Pivot Pin

This mechanism allows access by simply pushing the panel up to release. If necessary, a fixed bolt can be unscrewed to completely remove the tile.

Hinge Notch / French Hook

This integral feature allows tiles to be hung vertically from C-Profiles which provides unobstructed ceiling void access. Complete panel runs can be hung together during maintenance without causing damage to the tile.

Flying Arm

This is a hook-over bracket supplied fixed to the upstand of the panel. Access is obtained by pushing up the opposite end of the panel and sliding back. This reveals the flange which can then be lowered to a vertical position (lift & tilt).

End Arm

Similar to the flying arm, a hook plate is fixed to the tile edge (supplied loose for on-site fixing by installer). The tile can be completely lifted out of the grid and hooked back over the C-Profile, safely off the ground.

Mock Crossing

Traditional tartan grid systems make the use of trim strips and crossing boxes suspended from threaded rods and hanger brackets. This detail can be replicated by pressing mock crossing details into the C-Profile. Using C-Profiles instead of crossing boxes provides a far more rigid and durable structure. C-Profiles also provide flexibility to avoid costly bridging around ductwork in the void.

*Note: This includes the entire system and full associated components (suspension, tile, acoustic pad and associated fixings).*
SAS380 is an exposed grid suspended ceiling system for dual layer or heavy load requirements. The reinforced grid is ideal for service integration, capable of supporting cable trays and lights directly from the grid.

A performance system specifically designed for highly demanding applications, SAS380 is ideal for Data Centre specifications.

**Access**
Tile can simply be lifted and removed from the grid. No need for specialist tools.

**Module Sizes**
Standard module sizes are 574mm x 1149mm to fit two panels within a 1200mm x 1200mm grid. Bespoke panels sizes and grid arrangements are possible. Please contact our technical team for further details.

**Finishes**
SAS380 is available in all standard SAS finishes and bespoke finishes are available on request. For further details please refer to page 111 of the Metal Ceilings brochure, visit our website or contact our sales team.

**Perforations**
SAS380 can be manufactured with any standard SAS perforation. For our full range of perforations, please refer to page 85 of the Metal Ceilings brochure, or visit our website. Bespoke perforations are also an option.

**Acoustic Materials**
Acoustic mineral wool pad with black tissue face, foil back and sides. Other acoustic materials are available, please refer to page 22 of the Metal Ceilings brochure or visit our website.

**Service Integration**
Tiles can be formed with apertures during manufacturing and post painted for integration with lights and other services. Due to the high load bearing capacity of the SAS380, lights can be suspended directly from the grid.

**Technical Support**
Load capacity has been calculated precisely based on grid configuration. Any changes to grid configurations are likely to impact performance. Please contact our technical team for assistance and advice with any necessary alterations. Our technical team can also answer all questions relating to access, security, bespoke features, acoustics, service integration and/or load support.

SAS500 acoustic baffles offer a visually engaging alternative to suspended acoustic ceiling systems, ideal for exposed soffit areas. Baffles offer good sound absorption, effectively controlling reverberation within these highly sound reflective interiors. Available in numerous colours and sizes, the baffles can be suspended at a range of heights for further visual interest.

Baffle Sizes
Standard baffle lengths are 1200mm, 1500mm, 1800mm and 3000mm. Baffle depths are available from a minimum of 100mm to a maximum of 500mm (300mm maximum for 3000mm length). Standard width is 50mm. Bespoke baffle sizes and shapes are also available on request.

Note Individual baffles are supplied assembled ready for installation on-site.

Linear baffles intended for long continuous runs are supplied loose for on-site assembly.

Perforations
SAS500 can be manufactured with any standard SAS perforation. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

Acoustic Materials
Acoustic mineral wool pad with black tissue face. Other acoustic materials are available, please refer to page 22.

Service Integration
SAS500 baffles can be manufactured with integrated LED lighting. SAS500 Light is available with a fully integrated LED strip, for more information please go to sasintgroup.com/lighting or email enquiries@sasint.co.uk to request a brochure.

Technical Support
Please contact our technical team for all questions relating to access, security, bespoke features, acoustics, service integration or load support.

SAS510 acoustic waveform baffles offer a visually engaging alternative to suspended acoustic ceiling systems, ideal for exposed soffit areas. Baffles offer good sound absorption, effectively controlling reverberation within these highly sound reflective interiors. The radii of the baffles can form individual elements or continual rhythmic lines stretching across a ceiling plane.

**Baffle Sizes**
Standard baffle lengths are 1200mm, 1500mm, 1800mm and 3000mm*. Baffle depths are between 150mm (min.) and 1000mm (max) Standard baffle widths are 52.5mm.

* Continuous runs are suspended with a carrier rail and manufactured in 3000mm lengths for speed of installation and minimal seams.

Bespoke baffle sizes and shapes are available on request.

**Baffle Shapes**
There is no standard shape for SAS510, although waveforms are predominant. For waveform patterns, we would not recommend radii less than 1000mm.

SAS510 can also be formed into other, bespoke shapes. Please contact our technical design team for more information.

**Finishes**
SAS510 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request.

**Perforations**
SAS510 can be manufactured with any standard SAS perforation. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

**Acoustic Materials**
Acoustic mineral wool pad with black tissue face, foil back and sides. Other acoustic materials are available, please refer to page 22.

**Service Integration**
SAS510 baffles can be manufactured with integrated LED lighting.

**Technical Support**
Please contact our technical team for all questions relating to access, security, bespoke features, acoustics, service integration or load support.

**HAVE A QUESTION?**
Configurable with other products. Call us. Contact us on enquiries@sasintgroup.com
SAS600 offers a variety of applications from the purely aesthetic to high performance acoustics with service integration. The rafts and modules are available in a range of curved, flat or angled profiles as standard. Bespoke designs can be achieved to realise highly aspirational interiors.

The flexibility of SAS600 rafts and modules makes them ideal for both new build and retrofit acoustic solutions.

**Module Sizes**
Length: 300mm-3000mm  
Width: 300mm-1200mm

**Module Shapes**
Rafts and modules can be manufactured either flat or curved. Curved designs allow a larger acoustic area to be incorporated into the design.
Bespoke module sizes and shapes are available on request.

**Finishes**
SAS600 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request.

**Perforations**
SAS600 can be manufactured with any standard SAS perforation pattern. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

**Acoustic Materials**
Tissue wrapped acoustic mineral wool pad. Other acoustic materials are available, please refer to page 22.

**Service Integration**
Rafts and modules can be manufactured with integrated LED lighting and other M&E services.

**Cross Ventilation**
Ceiling mounted acoustic rafts provide acoustic absorption whilst allowing the concrete soffit to be fully exposed for energy-efficient natural cross ventilation cooling.

**Combination Ceilings**
Rafts and modules provide high levels of sound absorption. For demanding environments they can be installed in conjunction with a suspended metal ceiling.

**School Specifications**
SAS600 provides acoustic absorption compliant with BB93 and meets ventilation requirements detailed in BB101.

1 BB93: Acoustic Design of Schools  
2 BB101: Ventilation of School Buildings

**Technical Support**
Please contact our technical team for all questions relating to access, security, bespoke features, service integration or load support.

SAS610 Deltawing

SAS610 is a high performance acoustic product. It offers total absorption at mid-frequencies across the entire surface area, making it at least 15% better than any other raft. The unique geometry and laminate mineral wool infill provide the most efficient means of introducing sound absorption into a space – twice that of a Class A ceiling.

Module Sizes
Length: 2500 x 800 x 80 standard unit

Module Shapes
The Deltawing raft has been specifically engineered for optimum acoustic performance. The tapering shape and module size is fixed.

Finishes
SAS610 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request.

Perforations
Only specific perforations can be used on SAS610 as the open area ratio has been carefully considered for maximum acoustic performance.

Visible perforation on lower face – D1522 – 22% open area
Perforation on upper face – D2841 – 41% open area

Other perforations may be considered, please contact our technical team to discuss your requirements.

Acoustic Materials
Acoustic mineral wool pads fully enclosed within the raft structure. Tissue wrapped pads are included in the top of the raft and are removable for access to cable routing.

Service Integration
Rafts and modules can be manufactured with integrated LED lighting and other M&E services.

Cross Ventilation
Ceiling mounted acoustic rafts provide acoustic absorption whilst allowing the concrete soffit to be fully exposed for energy-efficient natural cross ventilation cooling.

Combination Ceilings
Rafts and modules provide high levels of acoustic absorption. For demanding environments they can be installed in conjunction with a suspended metal ceiling.

Technical Support
Please contact our technical team for all questions relating to access, security, bespoke features, service integration or load support.

HAVE A QUESTION?
Configurable with other products. Call us. Contact us on enquiries@sasintgroup.com
SAS700 is intended for projects requiring an aesthetic finish where tight budget control is a major factor. The system is ideally suited to expansive retail environments and other, similar high traffic areas requiring smoke extraction applications.

A highly-cost effective steel linear profile option, SAS700 comprises a steel rolled profile which simply clips into the carrier.

<table>
<thead>
<tr>
<th>Profile Sizes</th>

<td>Please contact our technical team for all questions relating to access, bespoke features and service integration.</td>
</tr>
</tbody>
</table>

Bespoke profiles are available on request. Longer continuous runs can be achieved through splices.

End Cuts
SAS700 can be cut to size on-site during installation. SAS would only recommend square cut ends due to the inherent properties of steel.

SAS710 is a discontinuous linear profile system intended for use in corridors and shorter run applications between ceiling features. Similar to SAS700, 710 is ideally suited to high traffic zones requiring open areas for smoke extraction.

A highly cost-effective linear profile option, SAS710 comprises a steel rolled profile which simply hooks onto the carrier.

SAS710 can be adapted for exterior applications also. Please contact our technical team for more details.

HAVE A QUESTION?

Configurable with other products. Call us.
Contact us on enquiries@sasintgroup.com
SAS740 is the most versatile of SAS' linear ceilings, able to accommodate complex geometry and void access. Unlike other continuous linear profile systems, SAS740 can intersperse with acoustic infill panels.

The aluminium system is suitable for spaces requiring a premium aesthetic alternative to suspended tile or open cell ceilings.

### Profile Sizes

<table>
<thead>
<tr>
<th>Standard Length</th>
<th>3000mm</th>
</tr>
</thead>
</table>
| Standard Dimensions | 30 x 165mm  
|                  | 40 x 100mm |

SAS740 can accommodate a wide range of bespoke profile shapes, sizes and waveform profiles, all available on request. Longer continuous runs can be achieved through splices.

### Access

Void access can be achieved through demounting profiles or access panels.

### Finishes

SAS740 is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request, including polished and anodised.

### Acoustic Materials

SAS740 can be specified with acoustic tiles in between linear profiles containing an acoustic mineral wool pad with black tissue face, foil back and sides. Typically supplied in RAL 9005 black PPC as standard. Other acoustic materials are available, please refer to page 22.

### Service Integration

Full services and lighting integration. SAS740 is also available with a fully integrated LED strip, for more information please go to sasintgroup.com/lighting or email enquiries@sasint.co.uk to request a brochure.

### Technical Support

Please contact our technical team for all questions relating to access, bespoke features and service integration.

SAS750 Tubeline fosters dynamic and impactful design along with practical considerations such as access and service integration. Tubeline offers specifiers numerous design features, such as curves and waveforms, as well as horizontal, vertical, interior and exterior mounting.

Available as either aluminium extrusions or rolled steel tubular sections, Tubeline is also available with a fully integrated LED strip (for more information please go to sasintgroup.com/lighting)

### Profile Sizes

<table>
<thead>
<tr>
<th>Standard Length</th>
<th>3000mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard Dimensions</td>
<td>25mm 50mm</td>
</tr>
</tbody>
</table>

SAS750 can accommodate a wide range of bespoke profile shapes, sizes and waveform profiles, all available on request. Longer continuous runs can be achieved through splices.

### Access

Void access can be achieved through demounting profiles or integrated access hatches.

### Finishes

SAS750 Tubeline is available in all standard SAS finishes, please refer to page 111. Bespoke finishes are available on request, including polished and anodised (aluminium only).

### Service Integration

Full services and lighting integration

### Technical Support

Please contact our technical team for all questions relating to access, bespoke features and service integration.

SAS800 Trucell is a decorative open cell ceiling, for airflow and smoke extraction applications. The metal ceiling system comprises a series of open cell modules designed to lay onto a suspension grid. The ceiling tiles can integrate within other metal ceiling systems and plasterboard ceilings.

Trucell is ideal for retail, transport or leisure applications with high human traffic flow. Rapid and safe smoke extraction is critical in such environments.

**Module Sizes**
600mm x 600mm panels and 600 x 1200mm (nominal depth 40mm).
Cell sizes are available in six different configurations (mm).

<table>
<thead>
<tr>
<th>Cell Size</th>
<th>Module Size</th>
</tr>
</thead>
<tbody>
<tr>
<td>50 x 50</td>
<td>120 x 120</td>

</tr>
<tr>
<td>86 x 86</td>
<td>200 x 200</td>
</tr>
<tr>
<td>100 x 100</td>
<td>Rectangle</td>
</tr>
</tbody>
</table>

Bespoke modules and tile sizes are available, subject to the size being divisible by the available cell sizes.

**Access**
Tiles can simply be lifted and removed from the grid.

**Finishes**
International White Pre-coat as standard. SAS800 is also available in RAL colours and other bespoke PPC finishes on request.

**Service Integration**
Trucell allows fire detection and control systems, air conditioning and other services to be located within the ceiling void. Traditional decorative lighting and LEDs can be installed within single or multiple adjacent cells.

**Open Area**
Open area is dependent on panel size. Based on a 600mm x 600mm panel, the cell configurations will have the corresponding open area:

<table>
<thead>
<tr>
<th>Cells Size</th>

SAS810 Tricell is a decorative open cell ceiling, for airflow and smoke extraction applications. Tricell is an aesthetic development of Trucell, offering the specifier an alternate cell pattern. The ceiling tiles can integrate within other metal ceiling systems and plasterboard ceilings.

Our open cell ceiling systems are ideal for retail, transport or leisure applications with high human traffic flow. Rapid and safe smoke extraction is critical in such environments.

**Module Sizes**
876mm x 876mm (standard)
Each panel has a nominal cell wall thickness of 15mm to give a precise engineered ceiling appearance.
Bespoke modules and tile sizes are available, subject to the size being divisible by the available cell sizes.

**Access**
Tiles can simply be lifted and removed from the grid.

**Finishes**
International White Pre-coat as standard. SAS810 is also available in RAL colours and other bespoke PPC finishes on request.

**Service Integration**
Tricell allows fire detection and control systems, air conditioning and other services to be located within the ceiling void. Traditional decorative lighting and LEDs can be installed within single or multiple adjacent cells.

**Technical Support**
Please contact our technical team for all questions relating to access, security, bespoke features, service integration or load support.

HAVE A QUESTION?
Configurable with other products. Call us. Contact us on enquiries@sasintgroup.com
SAS900 Polynode is an adjustable nodal ceiling system used to create multi-faceted ceiling designs. This polynodal system meets the demand of specifiers who desire a free-form ceiling surface which contributes to modern building design.

Simple equilateral triangle tiles can create a near infinite variety of polyhedral ceiling forms. Our patented nodal system can also be used to transition from ceiling to wall.

**Access**
SAS900 offers full access by way of hinge down tiles, suspended vertically from two nodes. Alternatively, tiles can be completely removed.

**Grid System**
- EMAC Grid suspension with threaded rod and node plate
- +/- 125 mm adjustment from adjacent node (standard system)
- System allows for faceted horizontal to vertical transitions (ceiling to wall)
Highly complex geometrical surfaces can be installed using standard components, simply by adjusting the vertical position of the node. Corner anchor points suspend tiles which can be adjusted to create a free form ceiling. Our patented nodal system can also be used to transition from ceiling to wall.

**Perforation**
SAS900 Polynode tiles can be supplied with any standard SAS perforation pattern. Bespoke patterns are also available on request.

**Acoustic Treatment**
Acoustic mineral wool with black tissue face, foil back and sides. Other acoustic treatments are available, depending on project requirement. Please contact our technical department for more information.

**Weights & Sizes**
- 10 kg/m²
- Standard modules are mounted on EMAC grid with 866 mm centres
- Standard nodes are mounted every 1000 mm
- Tiles are triangular as standard (980 mm on all sides)
- Min/Max tile dimensions are 280 mm / 1280 mm
Just one tile size significantly reduces the design and manufacturing costs associated with this type of geometric ceiling. Whilst the system is drawn as standard with triangular tiles, any number of simple polygonal shapes can be manufactured. Please contact our technical design team for more details.

**Integration**
Ceiling tiles can be formed with apertures during manufacturing for integration with lights and other services. SAS900 panels may require stiffeners to support centrally mounted lighting.

Lighting and other mechanical and electrical services can add significant loads to a ceiling. Loads applied to SAS900 ceiling tiles must not exceed 2 kg. For loads greater than 2 kg, we would recommend using independent suspension.

If you have a concern over loads, please contact our technical team for advice.

**Finishes**
- RAL 9010, 9003 and 9016 (Whites) polyester powder coat (PPC) as standard
- Available in full range of standard RAL colours
- Anti-Microbial PPC coatings (optional)
Other specialist finishes are available on request. For more information on non-standard finishes, please contact our technical services team.

**Standard System**
Simplest version using a single size tile. Minimal or no design input (unless deviating from tile size and perimeter detail). Standard flat grid.

Application Drawings: 0446, 0447, 0448.

**Advanced System**
Simple curved grid allowing for more complex installations. May use some different size tiles. Will require some design input.

Application Drawings: 0449, 0450.

**Bespoke Designs**
SAS900 Polynode can replicate almost any complex geometry. For fully bespoke designs, SAS Special Projects can assist you in realising highly complex designs from concept to completion. Please contact SAS Special Projects for further information on this design service.

Trims
Trims offer a subtle and clean aesthetic solution to tile edges at perimeters and penetration points. SAS border and perimeter trims are designed to accommodate our full range of suspended ceiling systems.

**Channel Trims**
Channel trims are used to support and mask the cut edges of ceiling tiles in an attractive manner. Wedges hold the tile edge tightly in place to give a clean finish.

**Shadow Gap Trims**
Shadow gap details are best applied to perimeters to offer a sharp clean edge to otherwise uneven vertical surfaces.

**Threaded Trims**
Threaded trims are designed to match the M6 thread-form details of Alugrid-Q and are used on full tile perimeter details.

**Angle Trims**
Angle trims are used on full tile perimeter conditions where regular access is required. They are also typically used on one side of a corridor.

**Floating / Suspended Trims**
Floating trims offer a clean finish when you cannot fix to an available structure or transom, or where ceiling edges are exposed.

**Transition Trims**
Transition trims allow for the effective join between a suspended metal ceiling with a plasterboard surround. Also available with a shadow gap detail, the transition trim range provides options for all standard suspended metal ceiling systems.

**Plasterboard Trims**
A plasterboard margin can provide an attractive feature to a suspended ceiling and minimises the need for cut tiles. This solution is particularly effective for irregular perimeters, corridors and small cellular spaces with existing structural walls.

**Column Rings**
Perimeter trims and shadow gap sections can be rolled to form column rings to match perimeter details. Rectangular column trims can also be supplied prefabricated in halves for easy on-site installation.

**Radiused Trims**
Perimeter trims and shadow gap sections can also be rolled to form radiused profiles to match perimeter details. When specifying or ordering any radiused trim it is necessary to indicate whether the trim required is Toe-In or Toe-Out.
1. Toe-In and Toe-Out | Metal Tile to Plasterboard Trim

**Toe-In** The C-channel that accepts the cut tile is rolled in towards the tiles and rolled away from the plasterboard.

**Toe-Out** The C-channel is rolled away from the metal tile and rolled in towards the plasterboard.

2. Toe-in and Toe-out | Plasterboard Perimeter Trim with no Metal Tile

In the case of plasterboard perimeter trims where no metal tiles are used, the plasterboard determines the toe.

**Toe-In** The plasterboard support edge is rolled in towards the plasterboard.

**Toe-Out** The plasterboard support edge is rolled away from the plasterboard.

3. Toe-in and Toe-out | Radiused Trims

Where a radiused trim contacts a metal ceiling tile, the side that accepts the tile determines the toe. This can be either tile perimeter trims or tile to plasterboard trims.

**Toe-In** The C-channel that accepts the cut metal tile is rolled in towards the metal tiles.

**Toe-Out** The C-channel is rolled away from the metal tiles.

![TCA 0107 Diagram](image3)
Trims | Angle

**TCA 0864**
Size 90mm Extended Leg Closure Angle
Item No 334209
Length (mm) 3000
Accessories TCP90, TCP180, TCP 90s (to be used only with linear trims)

**TCA 0113**
Size 25mm Perimeter Angle Trim
Item No 10544
Length (mm) 3000
Accessories TCP90, TCP180, TCP360

**TCA 0123**
Size 15mm Shadow Gap, 20mm Angle Trim
Item No 10545
Length (mm) 3000
Accessories TCP90, TCP180, TCP360

All dimensions are in mm. *Can also be manufactured as radiused trim for column rings.*
**TCA 0127**

Size: 20mm Shadow Gap, 20mm Angle Trim  
Item No: 10547  
Length (mm): 3000  
Accessories: TCP90, TCP180, TCP360

*Can also be manufactured as radius trimmed for column rings. All dimensions are in mm.*
**TRU MJ 150**

Feathered Cut Metal Tile to Plasterboard Trim
Item No 10586
Length (mm) 3000
Accessories TCB01, TCB08, TCP90, TCP180, TCP360, Perimeter Wedge

**TRU SJ 150**

Feathered Cut Metal Tile to Plasterboard, 15mm Shadow Gap Trim
Item No 10580
Length (mm) 3000
Accessories TCB01, TCB08, TCP90, TCP180, TCP360, Perimeter Wedge

**FAB SJ 150**

Feathered Cut Metal Tile to Plasterboard, 15mm Shadow Gap Trim Fabricated
Item No N/A
Length (mm) -
Accessories TCB01, TCB08, TCP90, TCP180, TCP360, Perimeter Wedge

All dimensions are in mm.
**TRU SH 150**

*Feathered Full Tile to Plasterboard, 15mm Shadow Gap Trim*

- **Item No**: 14224
- **Length (mm)**: 3000
- **Accessories**: TCB01, TCB08, TCP90, TCP180, TCP360

**TRU KB 150**

*Feathered Full Metal Tile to Plasterboard Trim*

- **Item No**: 174706
- **Length (mm)**: 3000
- **Accessories**: TCB01, TCB08, TCP90, TCP180, TCP360

**TCA 0144**

*Full Metal Tile to Plasterboard, 20mm Shadow Gap Trim*

- **Item No**: 14075
- **Length (mm)**: 3000
- **Accessories**: TCB01, TCB08, TCP90, TCP180, TCP360

All dimensions are in mm.

SAS330 Feathered Full Tile to Plasterboard Trim  
Item No 14223  
Length (mm) 3000  
Accessories TCB01, TCB08, TCP90/90s, TCP180/180s, TCP360

---

All dimensions are in mm.
Trims | Plasterboard

**TRU DW 330**

SAS330 Feathered Full Tile to Plasterboard Trim  
Item No 272083  
Length (mm) 3000  
Accessories TCB01, TCB08, TCP90/90s, TCP180/180s, TCP360

**TRU PB 330**

SAS330 Feathered Full Tile to Plasterboard, 15mm Shadow Gap Trim  
Item No 10588  
Length (mm) 3000  
Accessories TCB01, TCB08, TCP90, TCP180, TCP360

**TRU LK 330**

SAS330 Full Tile to Plasterboard, 15mm Shadow Gap Trim  
Item No 14232  
Length (mm) 3000  
Accessories TCB01, TCB08, TCP90/90s, TCP180/180s, TCP360

All dimensions are in mm.
TRU SJ 330

SAS330 Full Tile to Plasterboard, 15mm Shadow Gap Trim
Item No 10587
Length (mm) 3000
Accessories TCP90, TCP180, TCP90/90s, TCP180/180s, TCP360

All dimensions are in mm.

TRU SL 330

SAS330 Plasterboard Shadow Gap Closure Trim
Item No 187502
Length (mm) 3000
Accessories TCP90, TCP180, TCP360

All dimensions are in mm.
**TRU SJ 1508**

SAS130 Feathered Full Tile to Plasterboard 15mm Shadow Gap Trim (Plain to Suit Q15/08)
Item No: 222704
Length (mm): 3000
Accessories: TCB08, TCP90, TCP180, TCP360

**TRU SJ T1508**

SAS130 Feathered Full Tile to Plasterboard Trim (T15)
Item No: 22435

Accessories: TCB01, TCB08, TCP90, TCP180, TCP360, 21566

**TRU SJ T1516**

SAS130 Feathered Full Tile Plasterboard Trim (T15)
Item No: 222704
Length (mm): 3000
Accessories: TCB01, TCB08, TCP90, TCP180, TCP360, 21566

All dimensions are in mm.
**Trims | SAS130**

**TRU SJ 1516**

SAS130 Full Tile to Plasterboard 15mm Shadow Gap Trim
(Threaded to Suit Q15/16 & Q15/19)

Item No: 10570
Length (mm): 3000
Accessories: TCB01, TCB08, TCP90, TCP180, TCP360

**TRU TJ 1516**

SAS130 Full Metal Tile to Plasterboard Trim
(Threaded to Suit Q15/16 & Q15/19)

Item No: 10584
Length (mm): 3000
Accessories: TCB01, TCB08, TCP90, TCP180, TCP360

**TRU TJ P1508**

SAS130 Full Metal Tile to Plasterboard Trim (Plain to Suit P15/08)

Item No: 22437
Length (mm): 3000
Accessories: TCB01, TCB08, TCP90, TCP180, TCP360

All dimensions are in mm.
TRU TJ 1508
SAS130 Full Tile to Plasterboard Trim (Threaded to Suit Q15/08)
Item No 14201
Length (mm) 3000
Accessories TCB01, TCB08, TCP90, TCP180, TCP360

TRU SW 1508
SAS130 Full Metal Tile to Plasterboard 15mm Shadow Gap Trim
(Plain to Suit P15/08)
Item No 196059
Length (mm) 3000
Accessories TCB01, TCB08, TCP90, TCP180, TCP360

TRU SW 1516
SAS130 Feathered Full Tile to Plasterboard 15mm Shadow Gap Trim
(Plain to Suit P15/16)
Item No 10699
Length (mm) 3000
Accessories TCB01, TCB08, TCP90, TCP180, TCP360

All dimensions are in mm.
**FAB ST 150**

15mm Shadow Gap Plasterboard Trim Fabricated

- Item No: N/A
- Length (mm): 3000
- Accessories: N/A

*Can also be manufactured as radiused trim for column rings. All dimensions are in mm.*

**TCA 0152**

Plasterboard Perimeter Trim

- Item No: 10552
- Length (mm): 3000
- Accessories: N/A

**TCA 0153**

Bevelled Plasterboard Perimeter Trim

- Item No: 10553
- Length (mm): 3000
- Accessories: N/A
**TCA 0155**
15mm x 15mm Shadow Gap Plasterboard Trim
Item No 10555
Length (mm) 3000
Accessories N/A

**TRU PT 250**
25mm Feathered Extended Leg Plasterboard Trim
Item No 10585
Length (mm) 3000
Accessories TCB01, TCB08, TCP90, TCP180, TCP360, Perimeter Wedge

**TRU ST 150**
15mm Shadow Gap Plasterboard Trim
Item No 10579
Length (mm) 3000
Accessories N/A

All dimensions are in mm. *Can also be manufactured as radiused trim for column rings.
Trims | Bulkhead

**TCA 0169**
Cut Metal Tile to Vertical Plasterboard Bulkhead Trim
Item No 10697  
Length (mm) 3000  
Accessories TCP90, TCP180, TCP360, Perimeter Wedge

**TCA 0173**
Cut Metal Tile to Vertical Plasterboard Bulkhead  
Item No 10557  
Length (mm) 3000  
Accessories TCP90, TCP180, TCP360, Perimeter Wedge

**TCA 0219**
Full Metal Tile to Vertical Plasterboard Trim  
Item No 10564  
Length (mm) 3000  
Accessories TCB01, TCB08, TCP90, TCP180, TCP360

All dimensions are in mm.
Trims | Bulkhead

**TCA 1203**

SAS150 Full Tile Closure Detail  
Item No 266556  
Length (mm) 3000  
Accessories TCP90, TCP180, TCP360

**TCA 2111**

15mm Shadow Gap 20mm Angle Trim  
Item No 266551  
Length (mm) 3000  
Accessories TCP90, TCP180, TCP360, Perimeter Wedge

**TRU CJ 330**

SAS330 Shadow Gap Trim  
Item No 192042  
Length (mm) 3000  
Accessories TCB01, TCB08, TCP90, TCP180, TCP360

All dimensions are in mm.
**Trims | Mitre Junction**

**TCA 0215**
Cut Metal Tile 40mm Mitre Junction Trim
Item No 14091
Length (mm) 3000
Accessories TCB12, TCP90, TCP180, TCP360, Perimeter Wedge

![Diagram of TCA 0215](image)

**TCA 0310**
Cut Metal Tile 100mm Mitre Junction Trim
Item No 10565
Length (mm) 3000
Accessories TCB60, TCP90, TCP180, TCP360, Perimeter Wedge, Suspension Bracket 22008

![Diagram of TCA 0310](image)

All dimensions are in mm.
Trims | Linear

**TCA 0313**
Threaded C-Profile 50mm wide
Item No 14105
Length (mm) 3000
Accessories TCP90s, TCP180s, Suspension Bracket 40282

**TCA 0314**
Threaded C-Profile 40mm wide
Item No 14110
Length (mm) 3000
Accessories TCP90s, TCP180s, Suspension Bracket 40282

**TCA 1182**
C-Profile 40mm wide
Item No 22428
Length (mm) 3000
Accessories TCP90s, TCP180s, Suspension Bracket 40282

All dimensions are in mm.

---

1 Lightweight installations refer to the ceiling tile and acoustic fleece or pad only. 2 Where the ceiling is expected to support services or upgraded acoustic inlays such as plasterboard or a steel backing plate the loaded installation and the supporting grid should be to a maximum of 1000mm apart for SAS130. Suspension centres should always be considered when applying additional loads. All information from pages 285-295 is for guide use only.
9kg/m²
Based on standard 600 x 600 system and insulation

10kg/m²
Based on standard 600 x 600 system and insulation

System Depth | Hangers | System Depth | Hangers
---|---|---|---
105mm | 1500mm centres (1) | 111mm standard J-Bar | 1500mm centres (1)
 | 1200mm centres (2) | 111 deep J-Bar | 1200mm centres (2)

Primary Grid | Services | Primary Grid | Services
---|---|---|---
1500mm centres (1) | 2.5Kg | 1500mm centres (1) | 3.5Kg
 | 1200mm centres (2) | 6.0Kg | 1200mm centres (2)

Note: Loads in excess of 6.0kg must be supported independently. Nothing must be inserted into the Spring Tee except SAS ceiling tiles.

Maximum load applied to the ceiling tile is 2.5Kg including spreader yokes / SAS pattresses. Loads greater than 2.5Kg and less than 6.0Kg must be supported by an SAS pattresses.

Maximum load applied to the ceiling tile is 3.5Kg including spreader yokes / pattresses. Loads greater than 3.5Kg and less than 6.0Kg must be supported by an SAS pattresses.

Suspension centres should always be considered when applying additional loads. All information from pages 285 - 295 is for guide use only.
Radiant Chilled Ceilings

Our radiant chilled ceilings (typically a SAS330 variant) offer the system designer solutions to unbroken ceiling aesthetics. The surface of the ceiling is visually indistinguishable from our standard suspended systems, blending seamlessly with non-chilled products.

A silent alternative to air-conditioning units, the systems incorporate a single piece copper element into the rear of the tile. Our room comfort ceilings work on natural convection and radiation. Using water as the energy transfer medium, heat is absorbed and removed from the occupied space as water flows through the panel. Providing cooling, they offer draft free comfort with a net cooling capacity between 45 and 65 W/m².

Chilled Ceilings complement Chilled Beams to meet additional cooling requirements, e.g. solar gain around glazed elevations.
System Overview
Energy efficient – high operating temperatures
Up to Class B sound absorption
Silent operation
No moving parts / low maintenance requirements
Can heat as well as cool interiors
Accommodates future layout requirements including demountable partitioning
Requires a minimum 100mm void

Module Sizes
SAS Chilled Ceilings are normally specified within SAS330 incorporating mega-panels or planks. Other shapes can be manufactured to meet specific requirements.

Access
Our radiant chilled systems can be designed with hinge down access. We recommend safety cables due to the weight of the system compared to typical suspended ceilings.

Finishes
SAS radiant chilled systems are available in all standard SAS finishes. Bespoke finishes are available on request.

Perforations
Tiles can be manufactured with any standard SAS perforation pattern. For our full range of perforations, please refer to page 85. Bespoke perforations are also an option.

Acoustic Materials
Acoustic mineral fibre pad with black tissue face, foil back and sides. Other acoustic materials are available depending on performance requirements, please refer to page 22.

Service Integration
Ceiling panels and C-Profiles can be formed with apertures during manufacturing for integration with lights and other services. Panels may require stiffeners to support centrally mounted lighting. Please note Mechanical and electrical loads applied to ceiling panels must not exceed 7Kg. Loads in excess of 7Kg require independent suspension.

Grid Options
Linear Grid
C-Profiles set out to run in one direction across the ceiling plane.

Tartan Grid
C-Profiles set out to run in two perpendicular directions (cross noggin) across the ceiling plane.

Profile Options
C-Profile
A flush, smooth finish C-Profile available in a range of widths up to 300mm.

Omega C-Profile
Featuring a continuous thread-form facilitating easy location and relocation of partitioning. By means of an M6 bolt, partitioning can be relocated without causing damage to the ceiling. Also available in widths up to 300mm. Please note C-Profiles in widths ≤150mm can be open ended, using splices to connect longer runs. C-Profiles in excess of these widths must be closed ends, butt-jointed to other profiles. A range of narrower C-Profile and Omega C-Profile aluminium extrusions are available if preferred.

Gasket
An optional foam gasket features and a brush seal strip. This provides a tight seal between profile and tile, (supplied loose for on-site installation).

Technical Support
Please contact our technical team for all questions relating to access, security, bespoke features, service integration or load support.
SAS ISMs aesthetically encase an active or passive chilled beam within an architectural metal casing. Sometimes referred to as Multi-service Chilled Beams (MSCB), ISMs integrate most building services such as lights, sensors and smoke detectors.

Chilled Beams use water as an energy transfer medium, cooling interiors by the flow of chilled water through the system. The water supply and return temperatures for ISMs are typically between 14-17°C. This feature allows for free cooling, depending on the ability of the central plant.

Suitable for exposed concrete applications, ISMs are an energy efficient solution to provide excellent thermal comfort. Off-site prefabrication of units allows for exceptionally fast installation and relocation for future space flexibility. With no moving parts, maintenance and life cycle costs are less than traditional systems.

ISM generate minimal air movement and noise, especially when compared to mechanical alternatives, improving thermal comfort and staff productivity.
System Overview
Design led cooling system
Energy efficient: high operating temperatures
Integration of services
Passive or active cooling
Off-site prefabrication, testing and commissioning available
Flexible in terms of future room layouts
No moving parts, resulting in low maintenance regimes
Compatible with ground-sourcing and free cooling technologies

Module Sizes
Various shapes, widths and lengths are available to suit most applications.

Access
Via hinge-down panels.

Finishes
SAS ISMs are available in all standard SAS finishes. Bespoke finishes are available on request.

Perforations
Passive and Active ISMs: 50% open area is recommended for optimum performance.

Service Integration
ISMs can be formed with apertures during manufacturing for integration with lights and other services.

Technical Support
Further information on the range of SAS ISMs can be found in the Room Comfort brochure. Alternatively, please contact our technical design team.
Radiant Panels

Ceiling mounted Radiant Heating Panels offer a space saving alternative to traditional wall or floor mounted heating systems. Healthcare applications are prevalent due to the health and safety restrictions of touch temperatures and hygiene.

There are two types of panel available:

| Radiant Ceiling Tiles (RCT) | Radiant Ceiling Modules (RCM) |

Both panels can be freely suspended or integrated into an SAS suspended ceiling system. In non-healthcare environments, panels can be installed to provide space saving, flexible and targeted heating to occupants.

Radiant Heating Panels work by radiating heat downwards, heating the occupants and contents directly. By having a large radiant component, heat is radiated and convected into the space which leads to good thermal comfort.
System Overview
Easy to clean, ideal for hygienic environments
Low maintenance costs
(no moving parts)
Frees up valuable floor and wall space
Rapid warm up times, due to low water content
Low air movement minimising unwanted drafts
Low pressure drop (operating pressures)

Panel Sizes
Panels are available in lengths from 600mm and widths from 300mm.

Panel Weight
Approximately 22Kg/m² for tiles and filled copper elements.

Access
Dependent on application, usually by adjacent ceiling system.

Finishes
Radiant Heating Panels are available in all standard SAS finishes. Bespoke finishes are available on request.

Perforations
Dependent on design of panel and acoustic requirements.

Additional information

Energy Efficiency
Due to the low water content and rapid warm up times, Radiant Panels consume far less energy than other systems.

Low Whole Life Costs
Radiant Heating Panels have no moving parts, reducing maintenance requirements and associated costs.

Durability
Manufactured from aluminium and copper, RCTs and RCMs have life cycles of approximately 25 years.

Technical Support
Further information on SAS Radiant Panels can be found in the Room Comfort brochure. Alternatively, please contact our technical design team.
Metal ceiling systems often require a considered transition between horizontal and vertical planes. Architectural Metalwork creates this integration between planes in-keeping with the overall design intent. As examples, bulkheads, column casings and wall cladding can all provide design-led solutions to ceiling integration requirements.

Architectural metalwork can be purely aesthetic, used to incorporate M&E services, protect building elements or a combination. Products tend to be project specific, designed and manufactured to set criteria. SAS International has the design and manufacturing expertise to realise the most ambitious and challenging of these specifications. In all cases, SAS Architectural Metalwork provides an attractive, highly durable and easy to maintain solution.
SAS Architectural Metalwork solutions encompass a range of design-led integrating products including:

<table>

</tbody>
</table>

**Finishes**

Architectural Metalwork can be manufactured in steel or aluminium and finished in either PPC or clear lacquers. Aluminium products can also be anodised.

PPC coatings offer all of the durability and longevity benefits associated with SAS metal ceiling systems. Any colour from the BS or RAL systems can be achieved.

Metal sheet can be polished or brushed, offering a variety of textures to suit aesthetic preferences. Clear lacquers offer a highly robust, easily maintained coating while exposing the metal “grain” or sheen beneath.

**Durability**

Due to high humidity resistance, Architectural Metalwork products can be installed early during the programme. The clean surface is easily maintained and provides a robust finish that performs in demanding environments. In addition, wall panels and column casings can be specified to achieve specified levels of impact resistance. As with SAS metal ceilings an exceptional 25 year product life can be achieved.

**Benefits of Offsite Fabrication**

Architectural Metalwork is prefabricated offsite, reducing installation and build time onsite. SAS manufactured metal bulkheads and column casings can reduce onsite wastage by one third compared to traditional wet trades. Bulkheads can also be installed in a shorter period of time compared to traditional plasterboard and finishing. This can greatly reduce project lifetimes especially where limited engineering hours are available.
Please read these Terms and Conditions carefully as they apply to your access to and use of the services described in our brochures.

These Terms and Conditions constitute the entire agreement between us with respect to our brochure and the services we provide through it, and supersede all prior communications and agreements between us, whether electronic, oral or written, regarding the subject matter contained in our brochure. These Terms and Conditions shall be admissible in judicial or administrative proceedings to the same extent and subject to the same conditions as other business documents and records either printed or digital.

**Limitation of Liability**

Your attention is drawn specifically to this section.

1. The materials contained in this brochure are provided for general information purposes only. SAS International does not accept any responsibility for any loss which may arise from accessing or relying on information contained in this brochure.

2. All reasonable care has been taken to ensure the accuracy of information in this brochure, but no warranty is given regarding such information which may, in some instances, become incomplete, out of date or incorrect. It is essential that you verify information with us before taking any action that relies upon the accuracy of this brochure’s content.

3. If you are accessing our brochure and services in the course of a business, all implied warranties and conditions are excluded to the maximum extent permitted by law.

We shall not be liable for any loss of profit, data loss, loss of production, depletion of goodwill or any indirect loss, costs or expenses whatsoever arising out of your use of our brochure, your use of our services advertised in our brochure, or our failure to deliver services contained in a brochure. Our total liability for losses arising out of your use of this brochure, your use of the services available through it, or our failure to deliver any such services shall be limited to the total cost of the purchase under which the claim arises for any one event or series of connected events or, if no service has been purchased, to £50.00.

However, if you are accessing our brochure to use the services available through it otherwise than in the course of your business, you have certain statutory rights as a consumer regarding the performance of services. These statutory rights are not and will not be affected by any statement contained in these Terms and Conditions (and in particular, any provision which has the effect of limiting our liability to you in the event that any service is defective or fails to correspond with the description given to it in this brochure shall not apply).

**Indemnity**

If you are accessing our brochure in the course of a business, you agree to indemnify us and to keep us indemnified from all or any liability or damages we incur in contract, tort or otherwise towards a third party as a result of your use of this brochure.

**Copyright**

The contents of this brochure are protected by copyright under international law. Your reading of the brochure does not grant you a licence or right to use our trade marks. You are permitted to read the contents of this brochure and to make copies for your own personal use. You may also give copies to colleagues for their personal use on terms that SAS International is acknowledged as the source, the text is not altered in any way, and the attention of the recipients is drawn to this warning. All other use and copying of any of the contents of this brochure is prohibited.

**Our Customer Complaints Policy**

This brochure and the services promoted in it are provided by SAS International. We are committed to meeting the highest quality standards in the delivery of the service we provide to our customers. We aim to provide efficient and effective service and take any problems that do arise very seriously indeed. We aim to ensure that any complaints our customers may have are identified quickly and dealt with in accordance with our complaints handling procedure. In the event that you have any cause for complaint with regard to any of our services, please email enquiries@sasint.co.uk. Alternatively, you may raise the matter with our Company Secretary.

**General**

If any provision contained in these Terms and Conditions is determined to be invalid or unenforceable the remainder of the Terms and Conditions shall not be affected.

The brochure and the services offered within it have been prepared in compliance with the laws of England and Wales and are not suitable for use in other parts of the United Kingdom or overseas. You should seek appropriate legal advice if you are unsure as to which country’s law or jurisdiction applies to your circumstances.

Our brochure is published and controlled from the United Kingdom and these Terms and Conditions and your use of this brochure are governed by and construed in accordance with the laws of England and Wales. Unless you are using our brochure and services as a consumer, by agreeing to these Terms and Conditions you consent to all disputes arising out of or relating to your use of this brochure being decided only by the courts of England and Wales. If you are accessing this brochure from another jurisdiction it is your responsibility to ensure compliance with the laws that apply to that jurisdiction.
