Maintenance and Cleaning

Handling
These products are essentially finished materials and should be treated with care due to their manufacture, composition, edge details and surface finish.

The method of installation and support should be carefully noted when dismantling and reinstalling individual sections. Any undue force or strain when dismantling/reinstalling could result in permanent damage. Proprietary access tools are available for clip-in ceilings, please consult the SAS International Sales Office for details.

Large panels should always be handled by two people. Loose laid acoustic pads should be carefully repositioned after access to mitigate pattern staining through perforations from differential void to room air movements.

If the ceiling suspension requires modification this work should be carried out by a specialist ceiling contractor.

Cleaning
The frequency of cleaning will depend upon the function and usage of each area and the efficiency of the air conditioning/heating system. This period can only be determined after hand over and occupancy.

Although the ceiling materials are provided with a durable paint finish, abrasive or strong chemical detergents should not be used. A mild detergent diluted in warm water applied with a soft clean cloth, rinsed and wiped off with a chamois leather, will maintain the ceiling in good condition.

Oily or stubborn stains if not removed by washing, can be wiped with white spirit, but care is necessary to avoid affecting the gloss level of the paint finishes.

Please contact our Technical Department for further support and information.
